The Medical Library Association Guide to Developing Consumer Health Collections guides both library graduate school students and seasoned

librarians from academic, health sciences, and public libraries, to develop, maintain, nurture, and advertise consumer health collections. This authoritative guide from the respected Medical Library Association covers all that is involved in developing a new consumer health library including: Conducting community needs assessments and forging community partnerships Concerns about physical space, computers, and materials Funding, budgeting, and staffing Privacy and confidentiality concerns Publicity and advertising This book guides both graduate library school students and seasoned librarians from all types of libraries—academic, health center, hospital, public, and school—to develop, maintain and nurture not only consumer health collections, but also community partnerships and outreach programs. Examples of librarians' innovative and creative consumer health initiatives are included. Chapters include all that is involved in developing a consumer health collection including conducting community needs assessments; concerns about physical space, computers, and materials; budgeting, licensing, and staffing; privacy and confidentiality concerns; and community partnership and outreach.

**The Medical Library Association Guide to Providing Consumer and Patient Health Information** Springer

This 5th edition of this essential textbook continues to meet the growing demand of practitioners, researchers, educators, and students for a comprehensive introduction to key topics in biomedical informatics and the underlying scientific issues that sit at the intersection of biomedical science, patient care, public health and information technology (IT). Emphasizing the conceptual basis of the field rather than technical details, it provides the tools for study required for readers to comprehend, assess, and utilize biomedical informatics and health IT. It focuses on practical

examples, a guide to additional literature, chapter summaries and a comprehensive glossary with concise definitions of recurring terms for self-study or classroom use. *Biomedical Informatics: Computer Applications in Health Care and Biomedicine* reflects the remarkable changes in both computing and health care that continue to occur and the exploding interest in the role that IT must play in care coordination and the melding of genomics with innovations in clinical practice and treatment. New and heavily revised chapters have been introduced on human-computer interaction, mHealth, personal health informatics and precision medicine, while the structure of the other chapters has undergone extensive revisions to reflect the developments in the area. The organization and philosophy remain unchanged, focusing on the science of information and knowledge management, and the role of computers and communications in modern biomedical research, health and health care.

*Information Retrieval: A Biomedical and Health Perspective* IOS Press

This book presents state-of-the-art research methods, results, and applications in social media and health research. It aims to help readers better understand the different aspects of using social web platforms in health research. Throughout the chapters, the benefits, limitations, and best practices of using a variety of social web platforms in health research are discussed with concrete use cases. This is an ideal book for biomedical researchers, clinicians, and health consumers (including patients) who are interested in learning how social web platforms impact health and healthcare research.

*Putting Patients First* Springer Science & Business Media

This volume brings together librarians, LIS students, educators, and researchers, to discuss the many ways that information professionals and libraries serve as agents of securing health information justice.

*Consumer Health Information for Women* Springer

This book constitutes the thoroughly refereed papers of the 4th National Conference of Social Media Processing, SMP 2015, held in Guangzhou, China, in November 2015. The 14 revised full papers and 9 short papers presented were carefully reviewed and selected from 105 submissions. The papers address issues such as: mining social media and applications; natural language processing; data mining; information retrieval; emergent social media processing problems.

*Biomedical Informatics* Springer

Social information access is defined as a stream of research that explores methods for organizing the past interactions of users in a community in order to provide future users with better access to information. Social information access covers a wide range of different technologies and strategies that operate on a different scale, which can range from a small closed corpus site to the whole Web. The 16 chapters included in this book provide a broad overview of modern research on social information access. In order to provide a balanced coverage, these chapters are organized by the main types of information access (i.e., social search, social navigation, and recommendation) and main sources of social information.

*Consumer Health Informatics* Pyr

Discusses how to get the most out of a visit to a doctor by describing a typical office visit and ways to participate in health care decisions, and includes information on diseases, symptoms, avoiding illness, and medical tests.

*The Medical Library Association Guide to Answering Questions about the Affordable Care Act* American Library Association

This book constitutes the refereed proceedings of the 5th International Conference on Information Management and Big Data, SIMBig 2018, held in Lima, Peru, in September 2018. The 34 papers presented were carefully reviewed and selected from 101 submissions. The papers address issues such as data mining, artificial intelligence, Natural Language Processing, information retrieval, machine learning, web mining.

*They Ask You Answer* Springer Science & Business Media

Health informatics plays a central role in the digital transformation of the healthcare sector. The integration and connection of health services, practitioners and consumers is critical to the realisation of the improvements promised by digital health, and the secondary use of health data has led to ground-breaking research discoveries. Increased reliance upon all types of digital media has also established health informatics as a viable specialisation in healthcare. This book presents the proceedings of the 26th national Health Informatics Conference (HIC 2018), Australia's premier health informatics event, held in Sydney, Australia, in July/August 2018. The conference provides an environment for clinicians, researchers, health IT professionals, industry and consumers to integrate, educate and share the knowledge which drives innovative thinking, and this year's theme, 'Today's best practice, innovation today and preparing for tomorrow', focuses on the important issues of connecting the system, being smart with data, and enhancing the practitioner and consumer experience in healthcare interactions. The papers presented here reflect this theme, highlighting cutting-edge research evidence, technology updates and innovations from the digital transformation of the healthcare sector. Covering a wide spectrum of work, and encompassing major theoretical concepts, examples of key applications of new technologies and important new developments in the field of health informatics, the book will be of interest to all those working in the healthcare sector.

*Consumer Reports Health Answer Book* Libraries Unlimited

This report presents the results of a United States General Accounting Office review of consumer health informatics. It also presents a survey of consumer health informatics experts' views on the topic's issues.

This book constitutes the refereed proceedings of the 6th International Conference on Augmented Cognition, FAC 2011, held in Orlando, FL, USA in July 2011, within the framework of the 14th International Conference on Human-Computer Interaction, HCI 2011, with 11 other thematically similar conferences. The 75 full papers presented were carefully reviewed and selected from numerous submissions. The papers are organized in topical parts on theories, models, and technologies for augmented cognition; neuroscience and brain monitoring; augmented cognition, social computing, and collaboration; augmented cognition for learning; augmented cognition and interaction; and augmented cognition in complex environments.

*Connecting the System to Enhance the Practitioner and Consumer Experience in Healthcare* Springer

The book focuses on all aspects of providing consumers with health information in public libraries. It covers information needs and seeking behaviors, community analysis, collection development, advertising, outreach programs, training staff, and evaluation techniques.

*Consumer Health Informatics* Chandos Publishing

Patrons seeking medical information are often trying to gain control following an upsetting diagnosis—working with them can be rewarding and difficult. In this practical, readable guide, consumer health reference expert Michele Spatz, gives you an understanding of the psychology of those seeking medical information and the skills necessary to respond usefully and appropriately. Spatz outlines the most common inquiries and behaviors of health information searchers and the most useful go-to resources. Sample librarian-patron interactions in every chapter give you useful strategies and scripts. Dozens of templates and forms and tips on everything from setting up the reference desk to encourage confidential inquiries to using body language to signal your availability will help you create a welcoming, empowering atmosphere in your library. Chapters on ethics and potential legal issues guide you through the nitty-gritty of what constitutes practicing medicine without a license, confidentiality requirements, and more. Sections on email, virtual, and telephone reference will help you establish clear guidelines, and creative tips on marketing to healthcare providers will help you forge valuable new partnerships. A section on self-care offers strategies for dealing with job-induced stress. Every information professional who helps patrons with health inquiries will want a copy of this useful, inspiring book.

Answers three hundred of the most common medical questions, covering arthritis, nutrition, blood pressure, diabetes, and aging

*The Medical Library Association Consumer Health Reference Service Handbook* John Wiley & Sons

In an age of internet resource guides, which suffer from the malaise of being outdated before they are published, this much-needed publication addresses the information chain in its entirety, offering a timeless method of understanding healthcare information resources. The author takes a holistic approach in her consideration of healthcare information, with the aim of building an overall understanding of it within the information society. The text analyses the domain of healthcare information, its organizational structures and history, and the nature of its resources and the drivers for change affecting them. It looks at examples of healthcare information resources from the perspective of different user groups, including healthcare professionals and consumers, and goes on to highlight areas of research into healthcare information, including evaluation studies, user and impact studies, bibliometrics, metadata and Web 2.0. The key areas covered are: the healthcare information domain the history of healthcare and its information environment producers and users of healthcare information healthcare information organization healthcare information sources, services and retrieval healthcare information and knowledge management. Readership: This book is written primarily for students of library and information science (LIS), studying either at masters or advanced undergraduate level, and also for practising information professionals and specialists who want to develop their knowledge and bring their skills up to date. It will also be of interest to anyone working in the field of library and information science wishing to understand healthcare information, especially public librarians, who are increasingly called on to advise on health resources, as well as anyone interested in 'healthcare literacy'.

*Contemporary Consumer Health Informatics* Neal Schuman Pub

Comprised of fifteen chapters written by experienced consumer health librarians, The Medical Library Association Guide to Providing Consumer and Patient Health Information is designed for library and information science graduate students as well as librarians new to health and medical librarianship, regardless of library setting. It is comprehensive in scope, covering all aspects of consumer and patient health and medical information from their humble, grassroots beginnings to the ever-evolving applications of new technology and social media. In between, the mundane aspects of health and medical librarianship, such as needs assessment, costs, budgeting and funding, and staffing are discussed. Adding richness to this discussion are the coverage of more sensitive topics such as patient-friendly technology, ethical issues in providing consumer and patient health information, meeting the needs of diverse populations, and responding to individuals from various cultural backgrounds. No comprehensive picture of consumer and patient health librarianship would be complete without addressing the critical importance of marketing and strategic partnerships; such discussions round out this invaluable guide.. Patients today must be knowledgeable enough to participate in their health and well-being. Shorter hospital stays, changing reimbursement patterns and the gradual shift towards focusing on proactively maintaining health and managing disease require patients to be informed and actively engaged. Education, information and understanding are important components of actively-engaged patients. Correspondingly, in today's e-world, there is a glut of information resources available through the Internet - from YouTube videos to Googling to blogs and Twitter feeds. What is lacking in these information-rich times is the relevance of meaning and context for those who ask, "Does this health and medical information apply to me and my unique clinical picture?" or "How do I use this information?" As knowledge navigators, information technology wizards and content experts, librarians offer focused responses to individuals' specific and highly personal health and medical information queries. In a new healthcare world order of optimizing health and minimizing hospitalizations, such a service is invaluable. Sadly, there still exists in our highly networked and technological age an information gap for those who struggle in obtaining meaningful health or medical information. These individuals may be foreign-born, non-English speaking, poor, rural, aged or semi-literate. Whatever their status, librarians must have the wherewith-all to find germane resources and also help create responsive mechanisms to bridge that health information gap for vulnerable

citizens. The Medical Library Association Guide to Providing Consumer and Patient Health Information will guide you on the road to providing that response.

*Understanding Healthcare Information* Rowman & Littlefield

According to the Pew Foundation's "Internet in American Life Study," over 60 million Americans per year use the Internet to search for health

information. All those concerned with healthcare and how to obtain personally relevant medical information form a large additional target group. Many Medical Informatics programs—both in the United States and abroad—include a course in Consumer Health Informatics as part of their curriculum. This book, designed for use in a classroom, will be the first textbook dedicated solely to the specific concerns of consumer health informatics. Consumer Health Informatics is an interactive text; filled with case studies and discussion questions. With international authorship and edited by five leaders in the field, Consumer Health Informatics has tapped some of the best resources in informatics today.
