One of the main aims of management
accounting is to provide managers with
accurate information in order to provide a
good basis for decision-making. There is
evidence that the information provided by
management accounting systems (MAS) is
distorted and the occurrence of biases in
accounting information is widely accepted
among users of MAS. At the same time,
the intensity and the frequency of use of

MAS increase, too. Consequently, the quality of the provided information is critical. The focus of this simulation study is twofold. On the one hand, the impact of the sophistication of traditional costing systems on error propagation in the case of a set of input biases is investigated. On the other hand, the impact of single and multiple input biases on the quality of the information provided by traditional costing systems is focused. In order to investigate the research questions, a simulation approach is applied.

Taking a much more strategic approach, the focus, of this book, is on the full range of cost drivers within the value chain rather than on just the distinctions between product/non-product costs and unit-variable/fixed costs. Specially designed for managerial accountants, this updated edition thoroughly integrates issues that have emerged during the past ten years. By taking a value chain approach and stressing management accounting as an employee and management empowerment tool, the content is relevant, interesting, and usable for those whose primary concerns are something more than financial reporting. Maintaining Sustainable Accounting Systems in Small Business IGI Global Having an accurate assessment of company expenditures is a key to staying in business. Activity-based management (ABM) is the only system that offers the tools to correctly assess the outflow involved in a tightly knit supply chain and enables understanding not only of the total cost of ownership (TCO), but also how these costs should be allocated. Supply Chain Cost Control Using Activity-Based Management discusses the competitive

advantage that cost analysis and management can bring to companies within a supply chain. Addressing a number of strategies to evaluate the total cost inherent in a customer-supplier relationship, this book uses TCO, activity-based costing (ABC), and ABM to analyze and control supply chain costs. It employs industry survey data to examine whether these techniques are being used in real life, which factors affect their usage in the supply chain, and whether they are producing results. Combining survey results with game theory, the authors suggest cost reduction strategies for competitive environments and predict the outcomes of these strategies. This cost-effective system helps businesses remain competitive and profitable. Supply Chain Cost Control Using Activity-Based Management shows the importance of partnerships in applying ABM principles to suppliers and demonstrates the positive results that ABM can have on elements of the TCO.

Information Quality and Management Accounting Marcel Dekker Current management accounting techniques have not been widely accepted

as a means to develop a competitive advantage. The information obtained from the literature reviewed and the results from an empirical study that involved a sample of forty respondents from Equity Bank found that the modern management accounting practices provide very important skills and techniques in building competitiveness. The practices play an important role in the planning, developing, implementing and evaluating strategic competitive policies that result in a competitive advantage. The study outlines the importance of management accounting practices in providing strategies that lead to the creation of a competitive advantage in an organisation. However, the conclusions are drawn on a conceptual level and a future empirical investigation is needed to substantiate these claims further. The study also sets a foundation for more focused research into the importance of modern management accounting practices in developing a competitive advantage especially in the banking sector.
